

**BECAUSE YOU CAN'T SEE STERILE.®**

**How often should I perform biological monitoring (BI) (spore testing)?**

The CDC recommends testing **at least weekly** with a biological monitor for each sterilizer to ensure proper functioning. Users should follow the manufacturer's directions concerning the appropriate placement of the BI in the sterilizer. In addition to conducting routine biological monitoring, equipment users should perform biological monitoring:

- **Whenever a new type of packaging material or tray is used.**
- **After training new sterilization personnel.**
- **After any sterilizer repair or maintenance.**
- **After any change in the sterilizer loading procedures.**

Circle the date each week that BI testing was performed
