

Water usage chart

DentaPure™ DP365B Independent Water Bottle Cartridge

Instructions:

Each full square represents one liter of water. Check off one full box for each liter of water consumed. When the chart is full, it is time to replace your DentaPure™ Cartridge.

The DentaPure™ DP365B Cartridge is EPA registered to deliver safe, clean dental unit treatment water, for 365 days, at which time you should change your cartridge.

However, if your practice prefers to keep water usage records, the DentaPure DP365B Cartridge will treat 240 liters of water. The chart below is a convenient tool to track your water consumption. **One chart should be used per operatory.**
