

Crosstex Introduces a Disposable Prophylaxis Angle with a *Twist*

Hauppauge, NY – September 2015

Crosstex is pleased to introduce a new addition to the company's Preventives Line: the *twist® plus* Oscillating Disposable Prophylaxis Angle and Tapered Brush, a unique take on the disposable prophylaxis angle that brings an all-new level of performance to this fundamental tool.

Available in three styles (soft cup-TPLUSPASC, firm cup-TPLUSAFC, and tapered brush-TPLUSPATB), *twist plus* features a proprietary head design that rotates in a rapid 120° reciprocating (back-and-forth) motion instead of a traditional spinning motion. This innovation greatly diminishes frictional heat while reducing the spatter of potentially infectious materials like prophylaxis paste, saliva and blood. The angle's robust, patented gear mechanism offers smooth, continuous running and won't seize during use.

The combination of the motion, cup design and overall size makes the *twist plus* an ideal tool for a variety of subtle and precision-oriented tasks. For interproximal and sub-gingival cleaning, the angle's soft cup option flares out easily to allow greater access, while both of the available cup styles feature a new enhancement: a fluted design that improves loading of polishing paste and provides additional surface area to enhance interproximal polishing.

"The oscillating head makes it ideal for orthodontic applications and procedures where sensitivity is an issue, or for precision tasks that would otherwise cause spatter." *twist plus* provides an ease of placement with a counter rotational motion reducing splatter. The angle also features ergonomic improvements that optimize comfort and ease of use for both patient and clinician during procedures. The small head design improves visibility and maneuverability, while the pen-style grip has been tapered and recessed to ensure a secure, comfortable grip, even while wearing gloves.

About Crosstex

A Cantel Medical company, Crosstex manufactures a wide array of infection prevention and control products for the healthcare industry. Founded in 1953 and headquartered in Hauppauge, New York, Crosstex sells products including face masks, which are 100% manufactured in its FDA-registered New York facility.
